Digital Literacy Awareness Project (CSE0001)

PROJECT REPORT

NAME - NIHAL SAIN

REG. NO. – 25MIP10107

BRANCH – CSE(DATA SCIENCE)

YEAR – 1ST YEAR

Report 1 :

Report I used Microsoft PowerPoint for make this design because I don't know much other tools and this one is little easy for me to use. I already use it before so I feel okay with it. Starting was easy but making it look good was not that easy actually. In this design I try to explain digital literacy in simple way so people can understand it easy. I divide it into parts like "What is Digital Literacy", "Essential Tools", "Safe Practices and Professional Presence". In this part I show things like how we use internet, what tools we use, how to stay safe and how to behave online. I also add some icons and light colours so it does not look too boring. One thing I find difficult was arranging everything properly. First it was looking very messy and nothing was in right place. I change it many times but still not looking good in starting. It was little confusing also. But after some time it becomes better and I understand that small small changes make big difference. Now I feel design is not only about writing, it also about how we show it properly.

Report 2:

For this task, I made my profiles on GitHub, LinkedIn and Kaggle. At first I was just doing it because it was given, but while doing it I kind of understood why it matters. Like nowadays if someone searches your name and nothing comes up, it doesn't look that good. So it felt useful in a way. On GitHub, I created the profile README and added my name, branch, year and a small line about what I want to learn. I didn't write too much, just kept it simple. LinkedIn was a bit different, I added my education details there. I'm still not very used to LinkedIn honestly, it feels a bit formal, but I think it can help later. Kaggle is something I just started, it looks interesting but also a bit confusing right now. In the next few years, I'll try to use GitHub more and upload my projects, even small ones. On LinkedIn, maybe I'll slowly start connecting with people. For Kaggle, I just want to learn step by step and try some competitions. Overall, I think this will help me build something for my future, even if it's small right now.

Report 3:

For the coding exploration, I used HackerRank, completing their 'Solve Me First' coding challenge for beginners. This was a good opportunity for me to get accustomed to their coding interface. For collaboration, I designed a 5-question quiz for a Digital Literacy Awareness Quiz using Google Forms. Google Workspace tools are extremely user-friendly, and I was able to quickly attach a Google Sheet for data collection. In terms of academics, getting accustomed to HackerRank will prove useful for future technical internships, and knowing Google Forms and Google Sheets will allow me to collect data for group projects and club events without a hitch.

Report 4:

Sometimes poor digital communication can create problems without us even realising it. For example, if a student send a message or email to a professor in hurry, it may not sound right. Even if the student didn't mean to be rude, the message can look disrespectful or confusing. Because of this, the professor might misunderstand and not respond properly, which can affect the student work also. This kind of situation can be avoided if the student just take some time before sending the message. Writing in a simple and polite way, and checking it once, can really help. Small things like using proper greeting and respectful words makes a difference. Good communication is important because it avoids confusion and helps in maintaining a good impression in front of others.

Report 5:

While doing this task, I understood that phishing is very common and anyone can become a victim. Many fake messages look real, so it is easy to get confused. I learned that we should always be careful while using the internet. We should not click on unknown links or share personal details. From now on, I will be more careful and always check before trusting any message or website.
